

**DEPLOY  
INSTANTLY  
ANYWHERE IN  
THE WORLD.**

**CUSTOM SOLUTIONS.  
WITHOUT CUSTOM  
PRICING.**

Quickly deploy globally distributed edge computing solutions with a single interface to manage and optimize your solution anywhere in the world with PaaSPort.

Solve your colocation, connectivity, network and cloud requirements with a one-stop-shop solution unrivaled in the market.

**With PaaSPort, You Can:**

- ✔ Source colocation, bare metal, network, cloud connectivity and managed services under a single MSA
- ✔ Customize bare metal deployments globally
- ✔ Seamlessly connect to a multi-service interconnection platform to manage global IP, network and cloud connectivity

# COLOCATION, NETWORK, & CLOUD UNDER ONE ROOF.

With our proprietary digital infrastructure management platform, you pay for what you need and you can control every aspect of your digital deployment through a single-interface. Scale your colocation up or down, relocate to a closer facility, control packet paths across your network directly to exit nodes, directly connect to cloud providers and achieve better network performance.

## Colocation Partners

(Equinix, CoreSite, Digital Realty, and more!)

### Instant Bare Metal Servers

- Select a global datacenter in NA or Europe
- Sort by price, cores, memory, storage, transfer/port

### Custom Bare Metal Servers

- Select a global datacenter in NA or Europe
- Sort by price, cores, memory, storage, transfer/port

## Network Partners

(Comcast, Verizon, AT&T, and more!)

- PaaSPort offers Gig-E and 10G ports on dozens of carriers worldwide
- PaaSPort also delivers STM and SONET ports on request
- By leveraging our global wholesale international buying power, customers can gain access to wholesale rates from a myriad of carriers and colocation providers. We offer bundled, multi-homing package options in carrier neutral facilities worldwide
- Guaranteed connection speeds

## Cloud Partners

(AWS, Azure, Google Cloud, and more!)

- PaaSPort has the purchasing power with the cloud services, discounted rates with AWS, Google Cloud, Azure.
- Create hosted connections with AWS, Google Cloud and Microsoft Azure. Create layer 2 connects between data centers across the globe

# EDGE COMPUTING STREAMLINED, UNDER ONE ROOF.

## PaaSPort Streamlines Edge Computing

Edge computing is a distributed computing paradigm that brings computation and data storage closer to the sources of data. Edge deployments improve network performance, creates efficiencies in network design and can save companies thousands of dollars. A common misconception is that edge and IoT are synonymous.
